601.229 Computer Systems Fundamentals

Large and Fast

- ▶ We want: lots of memory and access it fast
- ► We really have: different speed/size tradeoffs
- ▶ Need methods to give illusion of large and fast memory

Locality

- ► What helps us is locality
- ► Temporal locality
 - same memory location often referenced repeatedly
 - example: instructions in loops
- Spatial locality
 - after an item is referenced
 - example: processing of sequential data

Example: Violation of Locality

Consider this C code
#define size 32768

```
int matrix[size][size];
  int main(void) {
    for(int i = 0; i<size; i++) {
      for(int j = 0; j < size; j++) {
        matrix[i][j] = 47;
    return 0;
► How fast does it run?
  $ gcc -Og cache1.c -o cache1
  $ time ./cache1
  real 0m1.710s
  user 0m0.871s
        0m0.839s
  sys
```

Example: Violation of Locality

Consider this C code

```
#define size 32768
int matrix[size][size];
int main(void) {
  for(int i = 0; i<size; i++) {
    for(int j = 0; j<size; j++) {
      matrix[i][j] = 47;
    }
  }
  return 0;
}</pre>
```

► How fast does it run?

```
$ gcc -Og cache1.c -o cache1
$ time ./cache1
real    Om1.710s
user    Om0.871s
sys    Om0.839s
```

Minor change

```
#define size 32768
int matrix[size][size];
int main(void) {
  for(int i = 0; i < size; i++) {
    for(int j = 0; j < size; j++) {
      matrix[j][i] = 47;
    }
  }
  return 0;
}</pre>
```

► How fast does it run?

Memory Types

| Technology |
|---------------------|
| SRAM on CPU |
| DRAM on motherboard |
| Flash memory |
| Magnetic disk |

| Speed fastest | Capacity smallest | Cost highest |
|----------------------|--------------------------|---------------------|
| | | |
| | | |
| slowest | higgest | lowest |

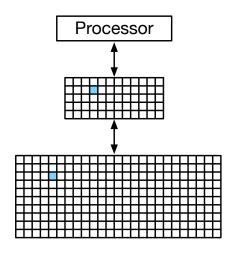

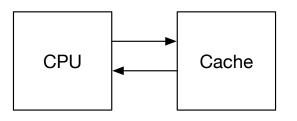

2 Level Memory

Smaller memory mirrors some of the large memory content

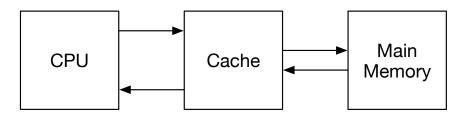

Cache Hit

Main Memory

- ► Memory request from CPU
- ▶ Data found in cache
- ► Send data to CPU

Cache Miss

- ► Memory request from CPU
- ▶ Data **not** found in cache
- ► Memory request from cache to main memory
- Send data from memory to cache
- Store data in cache
- Send data to CPU

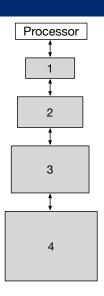

Concepts

- ▶ Memory has to be transferred from large memory to be used
- ► Cache: small memory connected to processor
- ▶ **Block:** unit of memory transferred
- ▶ Hit rate: fraction of memory lookups served by data already in cache
- ▶ Miss rate: fraction of memory lookups that require memory transfers
- ▶ **Hit time:** time to process a cache hit
- ▶ Miss penalty: time to process a cache miss

Memory Hierarchy

- ► More than 2 levels of memory
- ► Transfer between memory in level i and i+1 follows same principle, regardless of i
- ► Hierarchy: if item in level i, then it is also in level i+1
- ► Hence, we restrict our discussion to 2 levels

Memory technologies

Current Technologies

| Technology | Access Time | Price per GB |
|---------------------|------------------------|--------------|
| SRAM semiconductor | 0.5-2.5ns | \$300 |
| DRAM semiconductor | 50-70ns | \$6 |
| Flash semiconductor | 5,000-50,000ns | \$0.40 |
| Magnetic disk | 5,000,000-20,000,000ns | \$0.02 |
| Magnetic tape | - | \$0.008 |

(prices from 2018)

SRAM

- ▶ Integrated in CPU, runs at similar clock speeds
- ► Implemented using flip flops
- ▶ Uses more transistors than DRAM

DRAM

- ► Separate chips on the motherboard
- ► In PCs and servers, multiple chips on a module (DIMM)
- ► Implemented using capacitors lose charge → need to be frequently refreshed
- ► Lose charge when power is turned off

Flash Memory

- A type of EEPROM (electrically erasable programmable read-only memory)
 - ► allows read of individual bytes
 - writes require erase of a block, rewrite of bytes
- ► Writes can wear out the memory
- ► Has become standard storage memory for laptops, PCs

Hard Drives

- Magnetic charge on spinning disk
- ► Read/write requires read head at the right place
- Sequential data reads are relatively fast
- ightharpoonup Random access slow ightharpoonup not practical as process memory
- ▶ Useful for bulk data storage (especially when using RAID for redundancy)

Cache basics

Cache

- ► All data is in large main memory
- Data for processing has to moved to cache
- ► Caching strategies
 - mapping between cache and main memory
 - which data to read / keep / write

Direct Mapping

- ▶ Idea: keep mapping from cache to main memory simple
- \Rightarrow Use part of the address as index to cache
- ► Address broken up into 3 parts
 - memory position in block (offset)
 - index
 - ▶ tag to identify position in main memory
- ▶ If blocks with same index are used, older one is overwritten

Direct Mapping: Example

► Main memory address (32 bit)

0010 0011 1101 1100 0001 0011 1010 1111

► Block size: 1KB (10 bits)

► Cache size: 1MB (20 bits)

| 0010 0011 1101 | 1100 0001 00 | 11 1010 1111 |
|----------------|--------------|--------------|
| Tag | Index | Offset |

► Cache content Index Valid Tag Mapped Memory 000 no 001 no 010 no 011 no 100 no 101 no 110 no 111 no

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | no | | |
| | 001 | no | | |
| | 010 | no | | |
| | 011 | no | | |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ▶ Operation: read 10101
 - cache miss
 - retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | no | | |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | no | | |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ► Operation: read 11010
 - cache miss
 - ► retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | no | | |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | no | | |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ▶ Operation: read 10101
 - cache hit

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | no | | |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | no | | |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ▶ Operation: read 11010
 - ► cache hit

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | yes | 10 | 10000 |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | no | | |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ► Operation: read 10000
 - cache miss
 - retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | yes | 10 | 10000 |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | yes | 00 | 00011 |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ▶ Operation: read 00011
 - cache miss
 - ► retrieve value from main memory

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | yes | 10 | 10000 |
| | 001 | no | | |
| | 010 | yes | 11 | 11010 |
| | 011 | yes | 00 | 00011 |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ► Operation: read 10000
 - ► cache hit

| ► Cache content | Index | Valid | Tag | Mapped Memory |
|-----------------|-------|-------|-----|------------------|
| | 000 | yes | 10 | 10000 |
| | 001 | no | | |
| | 010 | yes | 10 | 10010 |
| | 011 | yes | 00 | 00011 |
| | 100 | no | | |
| | 101 | yes | 10 | 10101 |
| | 110 | no | | |
| | 111 | no | | |

- ► Operation: read 10010
 - cache miss
 - retrieve value from main memory
 - overwrite existing cache value

Block Size Tradeoffs

- ► Larger block size
 - ▶ fewer cache misses due to spatial locality
 - ► longer transfer times of block
 - ightharpoonup fewer blocks in cache ightharpoonup more competition for cache
- ► In practice
 - optimal value somewhere in the middle
 - depends on running process
